On human resource for the digital transformation era

TU BAO HO

Japan Advanced Institute of Science and Technology
1-1, Asahidai, Nomi, Ishikawa, Japan

Keywords: Human resource, digital transformation, data science.

We have witnessed great breakthroughs in digital technologies in recent years that are leading to significant changes of the society. What will be the jobs in a near future? Which skills are needed for new generations? How to prepare human resources in digital transformation time? In this talk we will address some issues and the core of such human resource education with illustration from different curriculums around the world including data science program at JAIST.

Bio: B.Tech. from Hanoi University of Technology in Applied Mathematics (1979), Master (1984) and PhD (1987) at University Paris 6, and habilitarion (1998) at University Paris 9, both on Machine Learning and Artificial Intelligence. Associate Professor (1991) at the Vietnam Academy of Science and Technology (VAST), and Professor (1998) at Japan Advanced Institute of Science and Technology (JAIST). Research interests include Machine Learning, Data Mining, Data Science, Computational Bio-Medicine, and Artificial Intelligence.
