

1<sup>st</sup>.June~31<sup>th</sup>,August I spend three months in IIASA (The International Institute for Applied Systems Analysis) Vienna as one of YSSP members (Young Scientists Summer Program).

Vienna is the capital and largest city of Austria. IIASA is an international research organization. It conducts inter-disciplinary scientific studies on environmental, economic, technological and social issues in the context of human dimensions of global change. IIASA is located in Austria near Vienna and is sponsored by its National Member Organizations in Africa, Asia, Europe, and North America.

YSSP 2006 has 49 members from 15 countries. The program has two parts, one is called Scientific Event, participants not only develop and expand research topics, but also take part in an interdisciplinary program of lectures, discussion groups and seminars given by IIASA, Institute Scholars and invited speakers; the other is called Social Event like dinner invitation to a local wine tavern, Vienna tour, BBQ night .^\_^.

YSSPer is given five minutes for a short introduction to know each other at the beginning of June, and fifteen minutes for a final presentation at the end of August. What I was doing in IIASA is carrying out a case study on how to support transportation fuel-cell technology creation in academia by a similarity analysis. I really enjoyed myself by YSSP in IIASA, I hope would have chance to visit Vienna again.
