

Connected Graphs and Spanning Trees

GAINA, Daniel

Japan Advanced Institute of Science and Technology

January 22, 2010

Describing the problem I

$G = (V, E)$ - graph

- 1 V - set of vertices
- 2 E - (multi)set of edges

Example:

$V = \{1, \dots, 9\}$

$E = \{ \langle 1, 2 \rangle; \langle 1, 4 \rangle; \langle 2, 3 \rangle; \langle 2, 5 \rangle; \langle 3, 6 \rangle; \langle 4, 5 \rangle; \langle 4, 7 \rangle; \langle 5, 6 \rangle; \langle 5, 8 \rangle; \langle 6, 9 \rangle; \langle 7, 8 \rangle; \langle 8, 9 \rangle \}$

Describing the problem II

$G = (V, E)$ connected;

$T = (V, E')$ spanning tree of G when

- 1 T tree,
- 2 $E' \subseteq E$.

Theorem

Every connected graph has a spanning tree.

Towards formalization

$$① \text{ connected}(G) \Rightarrow \exists G' \subseteq G. \text{tree}(G')$$

$$② \text{ connected}(G) \Rightarrow \text{connected}(\text{mktree}(G)) \wedge \text{nocycle}(\text{mktree}(G))$$

To do :

① data representations for mathematical objects (graphs);

② define

- `connected`
- `nocycle`
- `mktree`

Functions on graphs

$G = (\{1, 2, 3, 4, 5, 6, 7, 8\}, < 1, 2 >; < 1, 6 >; < 1, 5 >; < 3, 4 >; < 3, 7 >; < 4, 7 >; < 5, 6 >)$

- $\text{mcc}(A, G) = \text{max. connected comp. of } A \text{ in } G.$
 $\text{mcc}(6, G) = \{1, 2, 5, 6\}, \text{mcc}(8, G) = \{8\}$
- $\#_{\text{cc}}(G) = \text{no. of max. connected components}$
 $\#_{\text{cc}}(G) = 3$
- $\text{nocycle}(G) = \text{false}$

Spanning forests I

in the attempt of proving the desired properties we realized is much easier to prove a more general result:

Every graph has a spanning forest!

Definition

A **spanning forest** of a graph is a subgraph that consists of a set of spanning trees, one for each maximal connected component of the initial graph.

We define the function `mktree` which returns the spanning forest of a graph.

Spanning forests II

$$G = (\{1, 2, 3, 4, 5, 6, 7, 8\}, \langle 1, 2 \rangle; \langle 1, 6 \rangle; \langle 1, 5 \rangle; \langle 3, 4 \rangle; \langle 3, 7 \rangle; \langle 4, 7 \rangle; \langle 5, 6 \rangle)$$

$$\text{mktree}(G) = (\{1, 2, 3, 4, 5, 6, 7, 8\}, \langle 1, 2 \rangle; \langle 1, 6 \rangle; \langle 1, 5 \rangle; \langle 3, 4 \rangle; \langle 3, 7 \rangle)$$

Remark

The value is relative to the order chosen for the edges.

Properties to be proved

Assuming that we have defined

- $\text{mcc}, \#cc, \text{nocycle}, \text{mktree}$

we need to prove

- 1 $\text{mcc}(A, G) = \text{mcc}(A, \text{mktree}(G))$
- 2 $\#cc(G) = \#cc(\text{mktree}(G))$
- 3 $\text{nocycle}(\text{mktree}(G))$

Then we define $\text{connected}(G) := (\#cc(G) = 1)$ which implies

- $\text{connected}(G) \Rightarrow \text{connected}(\text{mktree}(G)) \wedge \text{nocycle}(\text{mktree}(G))$

Set I

```
mod* ID {  
  [Id]  
  - equality on Id  
  op ==_ : Id Id -> Bool {comm}  
  vars I J : Id  
  eq [i1] : (I = I) = true .  
  ceq [i2] : I = J if (I = J) .  
}
```

```
mod* SET(I :: ID) {  
  [Id < Set]  
  op empty : -> Set {constr}  
  op (_U_) : Set Set -> Set {constr assoc comm}  
  eq (S:Set U S) = S .  
  vars I I' : Id  
  vars S S' : Set
```

Set II

```
- (I in S) indicates whether I is an element of S or not
op _in_ : Id Set -> Bool .
eq I in empty = false .
eq I in I' = if I = I' then true else false fi .
eq I in I' U S = if I = I' then true else I in S fi .
```

```
- (S <s S') indicates whether S is subset of S'
op _<s_ : Set Set -> Bool .
eq empty <s S = true .
eq I <s S = if I in S then true else false fi .
eq (I U S) <s S' = if I in S' then (S <s S')
  else false fi .
```

Set III

```
- equality on Set
op ==_ : Set Set -> Bool {comm}
eq [s1]: (S == S) = true .
eq [s2]: (S == S') = (S <s S') and (S' <s S) .
ceq [s3]: S == S' if (S == S') .
}
```

GRAPH I

```
mod* VERTEX {  
  [Vertex]  
  op _=_ : Vertex Vertex -> Bool {comm}  
  vars A B : Vertex  
  eq [v1] : (A = A) = true .  
  ceq [v2] : A = B if (A = B) .  
}  
  
mod* GRAPH(V :: VERTEX){  
  [Edge]  
  [Graph]  
  op <_,_> : Vertex Vertex -> Edge {constr}  
  op nil : -> Graph {constr}  
  op _;_ : Edge Graph -> Graph {constr}  
}
```

GRAPH II

Remark

- `Edge` and `Graph` are constrained.
- Models consist of interpretations of terms formed with constructor and elements of sort `Vertex`.

SFOREST I

```
mod* SFOREST (V :: VERTEX) {  
  inc(INT)  
  inc(SET(V{sort Id -> Vertex})*{sort Set -> VtxSet})  
  inc(GRAPH(V))  
  
  vars A B C : Vertex  
  var G : Graph  
  
  - mcc(A,G) = max. connected component of A in G  
  op mcc : Vertex Graph -> VtxSet  
  eq mcc(A,nil) = A .  
  eq mcc(A, < B,C > ; G) =  
    if mcc(A,G) = mcc(B,G) or mcc(A,G) = mcc(C,G)  
    then (mcc(B,G) U mcc(C,G)) else mcc(A,G) fi .
```

SFOREST II

```
op nocycle : Graph -> Bool
eq nocycle(nil) = true .
eq nocycle(< A,B > ; G) =
  if mcc(A,G) = mcc(B,G) then false
  else nocycle(G) fi .
```

```
- #cc(G) = no. of max. connected comp. of G
op #cc : Graph -> Int .
op #vertices : -> Nat .
eq #cc(nil) = #vertices . - no. of vertices
eq #cc(< A,B > ; G) = if mcc(A,G) = mcc(B,G) then
  #cc(G) else #cc(G) - 1 fi .
```

SFOREST III

```
- mktree(G) returns the spanning forest of G
op mktree : Graph -> Graph
eq mktree(nil) = nil .
eq mktree(< A,B > ; G) =
  if mcc(A,G) = mcc(B,G) then mktree(G)
  else < A,B > ; mktree(G) fi .
}
```

Properties to be proved

Theorem

$\text{mktree}(G)$ *is a spanning forest of G .*

- 1 $\forall G. \forall A. \text{mcc}(A, \text{mktree}(G)) = \text{mcc}(A, G)$
- 2 $\forall G. \#cc(\text{mktree}(G)) = \#cc(G)$
- 3 $\forall G. \text{nocycle}(\text{mktree}(G))$

First Theorem I

Lemma

Max. connected comp. of G are the same as max.connected comp. of $\text{mktree}(G)$ i.e.

$$\forall G. \forall A. \text{mcc}(A, \text{mktree}(G)) = \text{mcc}(A, G)$$

Proof by induction on the structure of G .

$$\text{IB } \forall A. \text{mcc}(A, \text{mktree}(\text{nil})) = \text{mcc}(A, \text{nil})$$

$$\begin{aligned} \text{IS } \forall G. \forall A'. \text{mcc}(A', \text{mktree}(G)) &= \text{mcc}(A', G) \Rightarrow \\ \forall A. \forall B. \forall C. \text{mcc}(A, \text{mktree}(\langle B, C \rangle; G)) &= \text{mcc}(A, \langle B, C \rangle; G) \end{aligned}$$

First Theorem II

For the induction base

```
open SFOREST
op a : -> Vertex .
red mcc(a,mktree(nil)) = mcc(a,nil) .
close
```

For the induction step

```
ops a b c : -> Vertex .
op g : -> Graph .
eq [IH] : mcc(A:Vertex,mktree(g)) = mcc(A,g) .
- equations corresponding to each subcase ...
red mcc(a,mktree(< b,c > ; g)) = mcc(a, < b,c > ; g) .
```

First Theorem III

Equations corresponding to each subcase

- 1 $\text{eq } \text{mcc}(b, g) = \text{mcc}(c, g)$
 $\text{eq } \text{mcc}(a, g) = \text{mcc}(c, g)$
- 2 $\text{eq } \text{mcc}(b, g) = \text{mcc}(c, g) \text{ .}$
 $\text{eq } (\text{mcc}(a, g) = \text{mcc}(c, g)) = \text{false} \text{ .}$
- 3 $\text{eq } (\text{mcc}(b, g) = \text{mcc}(c, g)) = \text{false} \text{ .}$
 $\text{eq } \text{mcc}(a, g) = \text{mcc}(b, g) \text{ .}$
- 4 $\text{eq } (\text{mcc}(b, g) = \text{mcc}(c, g)) = \text{false} \text{ .}$
 $\text{eq } \text{mcc}(a, g) = \text{mcc}(c, g) \text{ .}$
- 5 $\text{eq } (\text{mcc}(b, g) = \text{mcc}(c, g)) = \text{false} \text{ .}$
 $\text{eq } (\text{mcc}(a, g) = \text{mcc}(b, g)) = \text{false} \text{ .}$
 $\text{eq } (\text{mcc}(a, g) = \text{mcc}(c, g)) = \text{false} \text{ .}$

Second Theorem I

Theorem

`mktree` *preserves the number of maximal connected components, i.e.* $\forall G. \#cc(mktree(G)) = \#cc(G)$.

Proof by induction on the structure of G .

$$\text{IB } \#cc(mktree(nil)) = \#cc(nil)$$

$$\text{IS } \forall G. \#cc(mktree(G)) = \#cc(G) \Rightarrow$$

$$\forall B. \forall C. \#cc(mktree(<B, C>; G)) = \#cc(<B, C>; G)$$

Second Theorem II

For the induction base

```
open SFOREST + EQL
red #cc(mktree(nil)) = #cc(nil) .
close
```

For the induction step

```
open SFOREST + EQL
ops a b : -> Vertex .
op g : -> Graph .
eq [IH] : #cc(mktree(g)) = #cc(g) .

1 eq mcc(a,g) = mcc(b,g) .

2 eq (mcc(a,g) = mcc(b,g)) = false .

red #cc(mktree(< a,b > ; g)) = #cc(< a,b > ; g) .
```

Third theorem I

Theorem

$\text{mktree}(G)$ *has no cycles, i.e.*

$\forall G. \text{nocycle}(\text{mktree}(G)) = \text{true}.$

Proof by induction on the structure of G .

IB $\text{nocycle}(\text{mktree}(\text{nil})) = \text{true}$

IS $\forall G. \text{nocycle}(\text{mktree}(G)) = \text{true} \Rightarrow$

$\forall B. \forall C. \text{nocycle}(\text{mktree}(\langle B, C \rangle; G)) = \text{true}$

Third theorem II

For the induction base

```
open SFOREST
red nocycle(mktree(nil)) .
close
```

For the induction step

```
open SFOREST
ops a b : -> Vertex .
op g : -> Graph .
eq [IH] : nocycle(mktree(g)) = true .

  ① eq mcc(a,g) = mcc(b,g) .

  ② eq (mcc(a,g) = mcc(b,g)) = false .

red nocycle(mktree(< a,b > ; g)) .
```

Conclusions

- we have proved a more general property (e.g every graph has a spanning forest) in order to achieve our goal;
- we didn't use initial semantics;
- constructor-based logics sufficient for verifications;
- the data structure `VERTEX` for the set of vertices is very general and can be instantiated with natural numbers;

Exercise

- 1 Prove $\forall G. \forall A. \forall B. (< A, B > \text{ in } G) \text{ if } (< A, B > \text{ in } \text{mktree}(G))$
- 2
 - A path between the vertex A and vertex B is a sequence of edges $< A_1, B_1 > \dots < A_n, B_n >$ such that
 - 1 $A_1 = A$,
 - 2 $B_n = B$ and
 - 3 $A_{i+1} = B_i$ for all $i \in \{1, \dots, n-1\}$.
 - A cycle is a path $< A_1, B_1 > \dots < A_n, B_n >$ such that $A_1 = B_n$
 - Prove that if there exists a path between A and B then there exists a path with nocycles
