— Notice —

- We do not accept this application, if " * " marked items are not filled in. In case of Windows and Mac OS, "**" marked item is also indispensable.
- This application is valid while you are a member of JAIST.
- In case of any changes in this application, please immediately inform to Center for Information Science.
- If you violate "Guidelines for Using JAIST Information Environment" (e.g. to be infected with virus, doing illegal access, using file sharing software and so on), we may disconnect your computer from the network.
- If you need the static IP address, please contact us.

— How to check MAC address (Be careful about the distinguish between wired LAN adapter and wireless one.) —

• Windows 11/10

Tap the Search button on the taskbar, type cmd in the search box and choose Command Prompt on the top. → Input "getmac /v /fo list" → Physical Address is MAC address.

• Windows 7

[start] → [Program] → [Accessory] → [Command Prompt] → Input "getmac /v /fo list" → Physical Address is MAC address.

• macOS

[System preferences] → [Network] → [TCP/IP] (Select Ethernet) → Ethernet Address is MAC address.
