

How to migrate data from previous to new JAIST Account

This document explains how to migrate data from old account to a new account for users whose student number may have changed due to university admission, etc

In this example:

New account: s1520202

Old account: s1521001

Please note that there may be some cases where the actual display and explanation may differ from the figure shown in the document. Please adjust accordingly.

1. Check and confirm the path of the new account's home directory

Please refer to <http://www.jaist.ac.jp/iscenter/en/jaist-cloud/desktop/cloud-desktop-folder/> for how to do that

Please note the character string up to `\\●●\●●\windows`. In this example, it will be as below:

New account home directory: `\\i1501\i1501\s1520202\windows\`

Old account home directory: `\\i1500\i1500\s1521001\windows\`

2. Log in to the JAIST cloud desktop (Windows) with the old account and open a command prompt. Type the following in half-width alphanumeric characters to mount the new account space to the old account.

("□" means space, and "¥" means "\").

※ Please refer to <http://www.jaist.ac.jp/iscenter/en/jaist-cloud/desktop/windows/> for JAIST cloud desktop (Windows) login method etc.

`net□use□*□\\i1501\i1501\s1520202\windows\□/user:ad\s1520202□*`

A screenshot of a Windows command prompt window. The background is black, and the text is white. The prompt shows the current directory as C:¥Users¥s1521001 and the command being entered is net use * ¥¥i1501¥i1501¥s1520202¥.windows /user:ad¥s1520202 *. The command is partially completed, with a cursor at the end.

(continues on the next page)

3. As prompted, enter the password of the new account. (You cannot see the input characters on the screen).

```
C:\Users\%s1521001>net use * %i1501%i1501%s1520202%.windows /user:ad%s1520202 *
Type the password for %i1501%i1501%s1520202%.windows:
```

4. When the password is entered correctly, a message stating that the connection was successful will appear.

```
C:\Users\%s1521001>net use * %i1501%i1501%s1520202%.windows /user:ad%s1520202 *
Type the password for %i1501%i1501%s1520202%.windows:
Drive Z: is now connected to %i1501%i1501%s1520202%.windows.

The command completed successfully.

C:\Users\%s1521001>
```

When you next open “My Computer” in the new account, "Network Drive" (Z drive in the picture below) has been added. Hereafter, we will refer to it as the "Z drive".

When Z drive is opened, the folders there will be as follows:

Desktop: New Account Desktop

My_Document: New account's My Documents folder

Profile: Folders where data such as Internet Explorer (IE) favorites, personal settings etc. are saved

5. From now on, we will explain each kind of data migration.

5.1. Migration of IE Favorites

5.1.1. Start IE and click [File] → [Import and Export].

5.1.2. The Import / Export Wizard starts up and the message "Welcome to the Import / Export Wizard" is displayed. Click "Next".

5.1.3. On the "Import / Export Selection" screen, click "Export Favorite" and click "Next".

5.1.4. "Favorite export source folder" screen will be displayed. Click "Next".

5.1.5. The following screen will appear, so click browse.

Navigate to the appropriate destination folder in the Z drive.

In this example, we created a new folder called 'bookmark' in the Z drive and saved it there. After specifying the save destination, click "Next".

5.1.6. The "Completing the Import / Export Wizard" screen will appear. Click "Finish". When "You have successfully exported your favorite items" appears, click "OK". Your favorite data will be saved in the location specified in 5-1-5. At this point, you are done with the old account.

5.1.7. Log in to JAIST cloud desktop (Windows) with new account and start IE. Launch the Import / Export Wizard in the same way as 5-1-2, click "Import Favorites", and click "Next".

5.1.8. When you are asked to import the bookmarks, click "Browse", specify the location specified in 5-1-5, and click "Next".

5.1.9. The "Favorite import destination folder" screen is displayed. Click "Next".

5.1.10. The "Completing the Import / Export Wizard" screen will appear. Click "Finish". Click "OK" when the message "Favorite Import Succeeded" appears. Your favorites will be transferred to the new account.

5-2. Migration of other personal data such as data used in lessons

Make an appropriate folder on the Z drive, and then drag and drop the folder with files of the old account to that new folder.

6. Before logging off, right-click the Z drive icon in My Computer and click "Disconnect". Please log off from the terminal server after the Z drive icon disappears.
