1	Introduction	1
1.1	Chapter Introduction	1
1.2	Background of the Study	1
1.3	Problem Statement	2
1.4	Research Objectives	4
1.5	Research Questions	5
1.6	Significance of the Study	6
1.6.1	Theoretical Significance	6
1.6.2	Methodological Significance	6
1.6.3	Practical Significance	7
1.6.4	Social and Cultural Significance	7
1.7	Scope and Limitations	7
1.7.1	Scope of the Study	7
1.7.2	Limitations of the Study	8
1.8	Dissertation Structure	9
2	Literature Review	11
2.1	Chapter Introduction	11
2.2	Historical Development of Cricket	12
2.2.1	One-Day International (ODI) Cricket	13
2.2.2	Psychological and Emotional Dynamics in ODI Cricket	15
2.2.3	Twenty20 (T20) Cricket	17
2.2.4	Psychological and Emotional Dynamics in T20 Cricket	19
2.3	Soccer (historical evolution and modern rules)	22

2.3.1	Psychological and Emotional Dynamics in Soccer	25
2.4	Game Refinement Theory and Motion in Mind Model	26
2.4.1	Game Refinement Theory	26
2.4.2	Measure of GR for Board Games	30
2.4.3	Measure of GR for Sports	33
2.4.4	Motion in Mind Model	37
2.5	Chapter Summary	38
3	Research Methodology	39
3.1	Chapter Introduction	39
3.2	Research Design	40
3.3	Data Collection	41
3.3.1	Data Collection for Comparative Analysis of Different Sports	42
3.3.2	Data Collection for Top-2 Competitive Teams in Different Sports . .	44
3.3.3	Data Collection for Phase-Wise Analysis of Different Sports	45
3.4	Analytical Frameworks	47
3.4.1	Game Refinement (GR) Theory	49
3.4.2	Motion in Mind (MiM) and Flow in Mind (FiM) Framework	50
3.4.3	Proposed Gravity-Inspired Analytical Framework	60
3.5	Chapter Summary	62
4	High-Scoring vs. Low-Scoring Sports	64
4.1	Chapter Introduction	64
4.2	Theoretical Background	65
4.3	Literature Review	67
4.4	Methodological Overview for Comparative Analysis	70
4.4.1	Data Collection and Sources	70
4.4.2	GR Measure, MiM, and FiM Parameters	70
4.5	Comparative Results Analysis	71
4.5.1	Velocity v , Mass m , and Potential Energy E_p	73
4.5.2	Acceleration a and Jerk j	75
4.5.3	Momentum $\vec{p}$ and Reward Frequency N	76
4.5.4	Addictive Density AD and Phi Ratio ϕ	77
4.6	Discussion	78
4.6.1	Debate Over the 90-Minute Match Length	87
4.6.2	Popularity vs. Evolution	87
4.7	Conclusion	89

4.8	Chapter Summary	90
5	A Gravity-Inspired Framework for Quantifying Competitive Interactions	92
5.1	Chapter Introduction	92
5.2	Theoretical Background and Inspiration	93
5.2.1	Competitive Force Analogy	95
5.2.2	Competitive Potential Analogy	97
5.3	Literature Review	99
5.4	Methodology	102
5.4.1	Data Collection and Preprocessing	102
5.4.2	Motion in Mind Framework	103
5.5	Results Analysis	108
5.6	Discussion	111
5.7	Conclusion	115
5.8	Chapter Summary	115
6	Phase-based Analysis of Engagement and Excitement Dynamics	118
6.1	Chapter Introduction	118
6.2	Theoretical Background	119
6.3	Literature Review	121
6.4	Methodology	123
6.4.1	Game Segmentation	123
6.4.2	Data Collection	123
6.4.3	Analytical Framework (MiM)	123
6.5	Results Analysis	124
6.5.1	Velocity v , Acceleration a , Jerk j , Addictive Density AD and the Phi ratio ϕ	124
6.5.2	Reward Frequency N and Momentum $\vec{p}$	129
6.5.3	Magnitude of Extraordinary Experience MEE , and Potential Reinforcement Energy PRE	130
6.6	Discussion	135
6.7	Conclusion	137
6.8	Chapter Summary	138
7	Conclusion, Limitations, and Future Work	139
7.1	Conclusion	139
7.2	Limitation	144

List of figures

2.1	Diagram of a cricket field, showing the 22-yard pitch at the center with wicket locations and important markings [29].	14
2.2	Diagram of a soccer field [64].	23
2.3	An illustration of move selection model based on skill and chance [82] . . .	31
4.1	GR measures of ODI, T20, and Soccer	72
4.2	Comparison of ODI and T20, and Soccer in terms of Velocity (v), Mass (m), and Potential Energy (E_p)	74
4.3	The intersection of acceleration $a = (\frac{1}{2}at^2)$, and jerk $j = (\frac{1}{6}jt^3)$ with line $y = vt$ or $\frac{t}{2}$. The parameters t_1 , t_2 , and t_3 represent the thresholds for effort, achievement, and discomfort, respectively.	75
4.4	Comparison of Momentum and Reward Frequency across ODI Cricket, T20 Cricket, and Soccer.	77
4.5	Solved uncertainty curves for soccer under different match durations. The 60-minute format aligns closely with the comfortable GR zone (0.07–0.08), offering an optimal balance between skill and chance.	83
4.6	Comparison of acceleration and jerk curves for 90-, 60-, and 45-minute soccer formats. Acceleration is shown with solid lines, while jerk is represented with dotted lines. The 60-minute format offers an ideal balance, maintaining excitement (moderate acceleration) and emotional smoothness (moderate jerk).	85
4.7	Relationship between MEE and PRE across different soccer match durations (90, 60, and 45 minutes), and their alignment with the optimal GR zone . . .	86
5.1	Gravitational Force	94
5.2	Gravitational Potential	95
5.3	Gravitational field	98
5.4	Competitive field	99
5.5	Competitive force of attraction	111

5.6	Competitive potential in ODI	112
5.7	Competitive Potential in T20	113
5.8	Competitive potential in Soccer	114
6.1	Phase-wise comparison of Acceleration (a) and Jerk (j) in ODI and T20 cricket, across the opening, middle, and end phases.	126
6.2	Phase-wise analysis of Velocity (v), Acceleration (a), Jerk (j), and Addictive Density (AD) in ODI and T20 cricket, across the opening, middle, and end phases.	127
6.3	Phase-wise comparison of Acceleration (a) and Jerk (j) between Soccer (a) and Soccer (b), across the opening, middle, and end phases.	128
6.4	Phase-wise analysis of Velocity (v), Acceleration (a), Jerk (j), and Addictive Density (AD) for Soccer (a) and Soccer (b), across opening, middle, and end phases.	128
6.5	Phase-wise comparison of Reward Frequency (N_p) and Momentum ($\vec{p}_p$) across ODI, T20, Soccer (a), and Soccer (b) formats, highlighting the evolving dynamics of reward occurrences and engagement intensity throughout gameplay phases.	130
6.6	Phase-wise comparison of the Magnitude of Extraordinary Experience (MEE_p) and Potential Reinforcement Energy (PRE_p) in ODI cricket, illustrating how emotional intensity and motivational reinforcement vary across different gameplay phases.	131
6.7	Phase-wise comparison of Magnitude of Extraordinary Experience (MEE_p) and Potential Reinforcement Energy (PRE_p) in T20 cricket, demonstrating the dynamic shifts in emotional intensity and reinforcement across distinct gameplay phases.	132
6.8	Phase-wise analysis of Magnitude of Extraordinary Experience (MEE_p) and Potential Reinforcement Energy (PRE_p) in Soccer (a), highlighting the evolving emotional intensity and motivational reinforcement throughout each gameplay phase.	133
6.9	Phase-wise comparison of Magnitude of Extraordinary Experience (MEE_p) and Potential Reinforcement Energy (PRE_p) in Soccer (b), illustrating how emotional intensity and motivational reinforcement dynamics vary distinctly across gameplay phases.	134

List of tables

2.1	Measures of game refinement for board games	33
3.1	The average observed $\bar{G}$ and $\bar{T}$ for GR measure	44
3.2	The average observed $\bar{G}$ and $\bar{T}$ for velocity analysis	44
3.3	Team-wise $\bar{G}$ and $\bar{T}$ average values for GR measure	45
3.4	Team-wise $\bar{G}$ and $\bar{T}$ average values for velocity analysis	46
3.5	Phase-wise average $\bar{G}_p$ and $\bar{T}_p$ values for GR_p measure	48
3.6	Phase-wise average $\bar{G}_p$ and $\bar{T}_p$ values for velocity analysis	48
3.7	MiM Measures	53
3.8	FiM Measures	53
4.1	Velocity and MiM measures of selected sports	71
4.2	GR and FiM measures of selected sports	72
4.3	GR, MiM and FiM measures across soccer formats with varying durations .	85
5.1	Average G, T, and v values across ODI, T20, and Soccer	104
5.2	Team-wise G and T values across ODI, T20, and Soccer	105
5.3	Top performing team-wise MiM metrics across ODI, T20, and Soccer . . .	108
6.1	Phase-wise Velocity and MiM measures	124
6.2	Phase-wise GR and FiM measures	125
